Security Architecture

BU-Based Access Control — Kebony Odoo 19

Version 1.0 — March 2026

Audience: IT, Management, Department Heads

Scope: User profiles, access rights, data visibility across all Kebony entities

The Security Concept

Two independent dimensions: what you CAN DO vs what you CAN SEE

```
DIMENSION 1: FUNCTIONAL RIGHTS  (what you can DO)
═══════════════════════════════════════════════════════════

  Controlled by: Business Unit Group (one per user)

  ┌──────────┐ ┌──────────┐ ┌──────────┐ ┌──────────┐
  │ 10 Manage- │ │ 15 Finance │ │ 20 Ware-   │ │ 21 Plan-   │
  │ ment       │ │ & Admin    │ │ house      │ │ ning       │
  └──────────┘ └──────────┘ └──────────┘ └──────────┘

  ┌──────────┐ ┌──────────┐ ┌──────────┐ ┌──────────┐
  │ 30 Produc- │ │ 50/52      │ │ 60 Market- │ │ 70 R&D     │
  │ tion       │ │ Sales      │ │ ing        │ │            │
  └──────────┘ └──────────┘ └──────────┘ └──────────┘

DIMENSION 2: DATA VISIBILITY  (what you can SEE)
═══════════════════════════════════════════════════════════

  Controlled by: Company Assignment (native Odoo multi-company)

  ┌────────┐ ┌────────┐ ┌──────────┐ ┌────────┐ ┌────────┐
  │INC (US)│ │BNV (BE)│ │Holding   │ │KAS (NO)│ │NAS (NO)│
  │        │ │        │ │(BE)      │ │        │ │        │
  └────────┘ └────────┘ └──────────┘ └────────┘ └────────┘
```

Key principle: A Finance user at INC and a Finance user at BNV have the **same functional rights** — they just see different company data. One group per BU, not per BU per entity.

Business Unit Groups

Each group automatically inherits the correct Odoo permissions

Code	Business Unit	Inherits (auto-granted)	Key Capabilities
10	Management	Base user only	Read-only oversight of all areas
15	Finance & Administration	Accounting Manager, Purchase Manager	Full accounting, vendor bills, EOM accruals, margin, cost versions
20	Storing, Shipping & Handling	Stock Manager, Purchase User	Warehouse ops, receipts, transfers, pack reservation
21	Planning & Order	Stock User, MRP User	Sales orders, planning families, MRP visibility
30	Production	MRP Manager, Stock User	Manufacturing orders, dryer loads, autoclave, process packs
50/52	Sales (Nordic + International)	Base user, + Sales/CRM (TBD)	Sales orders, CRM, quotations, customer contacts
60	Marketing	Base user, + CRM (TBD)	CRM contacts, basic sales visibility, campaigns
70	R&D	MRP User, Stock User	Product development, BOM management, stock visibility

Note: Sales and CRM implied groups are pending Odoo 19 XML ID discovery. BU 50/52 and 60 currently only inherit base user rights. Sales/CRM permissions will be added once the correct Odoo 19 group references are confirmed.

Access Matrix — Custom Kebony Models

R = Read only, RWC = Read + Write + Create, CRUD = Full access, — = No access

Model	10 Mgmt	15 Finance	20 WH	21 Plan	30 Prod	50 Sales	60 Mktg	70 R&D
Cost Versions kebony.cost.version	R	CRUD	—	R	—	—	—	—
Planning Families kebony.planning.family	R	R	—	CRUD	R	—	—	R
Dryer Loads kebony.dryer.load	R	—	—	RWC	CRUD	—	—	—
Autoclave Batches kebony.autoclave.batch	R	—	—	RWC	CRUD	—	—	—
Process Packs kebony.process.pack	R	—	—	RWC	CRUD	—	—	—
Accounting Hub kebony.accounting.hub	R	CRUD	—	—	—	—	—	—
Consignment Prices stock.consignment.price	R	CRUD	—	—	—	R	—	—

Design principle: Planning creates and manages schedules. Production executes and owns the operational records. Finance owns cost data and accounting tools. Management sees everything but changes nothing.

Access Matrix — Standard Odoo Applications

Controlled via implied groups (automatic when BU is assigned)

Application / Feature	10 Mgmt	15 Finance	20 WH	21 Plan	30 Prod	50 Sales	60 Mktg	70 R&D
Sales Orders	R	R	R	**Full**	—	**Full**	R	—
Customer Invoices	R	**Full**	—	R	—	R	—	—
Vendor Bills	R	**Full**	R	—	—	—	—	—
Purchase Orders	R	**Full**	RWC	RWC	—	—	—	—
Inventory / Stock	R	R	**Full**	RW	RW	R	—	R
Manufacturing Orders	R	R	—	RW	**Full**	—	—	R
Bills of Materials	R	R	—	RW	RW	—	—	**Full**
Products	R	R	R	R	R	R	R	**Full**
CRM / Contacts	R	R	R	R	—	**Full**	**Full**	—
Reports (BOL, etc.)	R	**Full**	**Full**	R	—	**Full**	—	—
Accounting Hub (EOM)	R	**Full**	—	—	—	—	—	—
Margin Recompute	R	**Full**	—	—	—	R	—	—
Pack Reservation	R	—	**Full**	**Full**	—	RW	—	—
Settings / Configuration	—	**Full**	—	—	—	—	—	—

Administrator override: Users with Admin rights (base.group_system) bypass all restrictions. The matrix above applies to non-admin users only.

Button & Menu Restrictions

Sensitive operations are hidden from unauthorized BUs

FINANCE-ONLY BUTTONS

Button / Action	Location	Visible to
Run EoM Accruals	Accounting Hub	15 Finance
Generate Consignment PO	Accounting Hub	15 Finance
Recompute Margin	Invoice form	15 Finance, 50 Sales

OPERATIONAL BUTTONS

Button / Action	Location	Visible to
Select Packs	Sales Order	20 WH, 21 Plan, 50 Sales

MENU VISIBILITY

Menu	Visible to
Kebony Accounting Hub	Accounting users (implied by BU 15)
Manufacturing menus	MRP users (implied by BU 21, 30, 70)
Inventory menus	Stock users (implied by BU 20, 21, 30, 70)

How it works: Odoo hides buttons and menus based on the `groups=` attribute in the XML view definition. If a user's BU group doesn't match, the button simply doesn't appear — no error, no confusion.

Data Visibility — Multi-Company

Which entities a user can see is controlled by their company assignment

HOW IT WORKS

- Each user has a list of **Allowed Companies** on their profile
- Record rules filter data to only show records from those companies
- Users can switch between their allowed companies via the company switcher
- This is **native Odoo** — no custom code needed

ENTITY MAP

Entity	Code	Location	Type
Kebony Inc.	INC	US	Trader
Kebony BNV	BNV	Belgium	Manufacturer
Kebony Holding	Holding	Belgium	Holding
Kebony KAS	KAS	Norway	Manufacturer
Kebony Norge AS	NAS	Norway	Operations

EXAMPLE ASSIGNMENTS

```
User: Sarah (US Finance)
  BU Group:  15 — Finance & Administration
  Companies: INC only
  → Sees only Kebony Inc. data
  → Full accounting rights

User: Erik (Norway Production)
  BU Group:  30 — Production
  Companies: KAS + NAS
  → Sees both Norwegian entities
  → Full manufacturing rights

User: Marc (Group CFO)
  BU Group:  15 — Finance & Administration
  Companies: ALL (INC + BNV + Holding + KAS + NAS)
  → Sees all entities
  → Full accounting rights everywhere
```

Same BU, different visibility: Sarah and Marc are both BU 15, but Sarah sees only INC while Marc sees everything. The BU defines *what* they can do. The company list defines *where*.

How to Assign a User

Step-by-step procedure for IT / HR

NEW USER SETUP

1. Go to **Settings → Users & Companies → Users**
2. Create new user (name, email, login)
3. Scroll to **"Kebony Business Units"** section
4. Select the appropriate BU from the dropdown
5. Set **Allowed Companies** (which entities they need)
6. Set **Default Company** (their primary entity)
7. Save — all implied permissions are set automatically

That's it. No need to manually set Accounting Manager, Stock User, MRP User, etc. The BU group handles it all via implied groups.

CHANGING A USER'S BU

1. Open user form
2. Change BU group in the dropdown
3. Save — old permissions removed, new ones applied

THINGS TO NOT DO

- **Don't** manually add standard Odoo groups — the BU handles it
- **Don't** give Admin rights unless truly needed
- **Don't** assign multiple BU groups to one user — pick one
- **Don't** use Studio to create new groups — use the code

Admin = God mode. Admin users bypass ALL restrictions. Only give Admin to IT administrators who need system configuration access.

Monthly Security Audit Checklist

Review quarterly (or after any org change)

USER REVIEW

#	Check	Action if failed
1	All active users have a BU group assigned	Assign appropriate BU
2	No user has multiple BU groups	Remove extra groups
3	Leavers are deactivated (not deleted)	Archive user
4	Admin count is minimal (max 2-3)	Downgrade to BU group
5	Company assignments match org structure	Update allowed companies

ACCESS REVIEW

#	Check	Action if failed
6	Sensitive buttons (EOM, margin) only visible to Finance	Check groups= in views
7	Manufacturing data not accessible to Sales	Check ir.model.access
8	No orphaned Studio groups overriding BU	Remove Studio groups

WHERE TO CHECK

User List

Settings → Users & Companies → Users
Filter by "Kebony Business Unit" column

Group Members

Settings → Technical → Groups
Search "Kebony" → click group → Users tab

Access Rights

Settings → Technical → Security → Access Rights
Filter by group to see all model permissions

Record Rules

Settings → Technical → Security → Record Rules
Verify company isolation rules are active
