Analytical & Management Reporting

KPI Framework, Data Stewardship & Reporting Architecture

Steering Committee — Executive Summary

March 2026

Three Reporting Layers — One Version of the Truth

Odoo native dashboards at Day 1, custom reports from Day 30, Fabric BI from Q4

Go-Live (Jul 2026) — Odoo Native	Phase 2 (Sep) — Custom SQL	Phase 3 (Q4) — Fabric + Power BI

Layer 1 — Odoo Native

Day 1 Available at go-live, zero custom dev

- Invoice Analysis pivot (Revenue by area/month)
- Sales Analysis (SO pipeline)
- Inventory Valuation (stock by product/lot)
- Aged Receivable / Payable
- MRP Production Analysis
- P&L and Balance Sheet
- **Margin by SKU, country, customer, product group**

Covers ~80% of KPIs at go-live

Layer 2 — Custom Odoo SQL

Phase 2 Built in kebony_bol_report module

- **Sales Dashboard** (pivot by Sales Area x Month)
- Five metrics: Invoiced, To Invoice, To Cash In, Prepayments, Paid
- Two views: Sales Pipeline + Cash Position
- Volume m3, drill-down to customer/rep/invoice
- **Margin Report** per invoice with COGS decomposition
- EOM Accrual tracking & liability balance

Entity-aware: US shows Sales Areas, BNV shows Countries

Layer 3 — Microsoft Fabric

Q4 2026 Enterprise BI platform

- Fabric Data Factory → OneLake
- Bronze / Silver / Gold medallion layers
- Power BI dashboards for C-suite
- Cross-entity consolidation
- Blended KPIs (Odoo + AX + external)
- Microsoft Purview for data governance
- Copilot AI/ML for forecasting

Owned by CIO, data fed from Odoo API

Key principle: Odoo is the system of record. Fabric consumes, never writes back. Every number in Power BI traces to an Odoo document.

Data Stewardship — One Owner per KPI Family

No KPI without an owner. No report without a source definition.

KPI Family	Steward	Source System
Revenue & Invoicing	Controller	Odoo Accounting
Sales Pipeline	Sales Director	Odoo Sales
Cash & Receivables	Controller	Odoo Accounting
COGS & Margin	Controller	Odoo (custom module)
Inventory & Stock	Warehouse Manager	Odoo Inventory
Production Output	Production Manager	Odoo MRP
Purchasing & Spend	Purchasing Manager	Odoo Purchase
Quality & Scrap	Quality Manager	Odoo Quality

Steward Responsibilities

- **Define:** What exactly does this KPI measure?
- **Source:** Which Odoo field / report is the single source?
- **Quality:** Is the data complete, timely, accurate?
- **Cutoff:** When is the month closed? No late changes.
- **Escalate:** Flag data issues before they reach the board

One version of the truth: If the Sales Director reports revenue by area, and the Controller reports revenue by area, they MUST match — because both pull from the same Odoo invoice pivot. Disagreements = data quality issue, not a reporting issue.

No more Excel kingdoms. Every operational KPI lives in Odoo. Personal spreadsheets are analysis tools, not source-of-truth systems.

Custom Sales Dashboard — Already Built

Native Odoo pivot report — live in the system today

Sales Pipeline View

Sales Area	Invoiced	To Invoice	Total Pipeline
CENTRAL	$142k	$38k	**$180k**
EAST-CAN	$98k	$65k	**$163k**
NORTH-EAST	$210k	$22k	**$232k**
SOUTH-EAST	$87k	$41k	**$128k**
WEST	$165k	$55k	**$220k**
TOTAL	**$702k**	**$221k**	**$923k**

Rows = Sales Area | Columns = Metric | Drillable by Month, Customer, Rep

Cash Position View

Sales Area	Paid	To Cash In	Prepayments
CENTRAL	$120k	$22k	$15k
EAST-CAN	$75k	$23k	$8k
NORTH-EAST	$185k	$25k	$12k
SOUTH-EAST	$70k	$17k	$5k
WEST	$140k	$25k	$18k
TOTAL	**$590k**	**$112k**	**$58k**

To Cash In = invoiced not yet paid | Prepayments = cash received, not yet delivered

No more excuses. This report runs live in Odoo under Accounting → Reporting → Sales Dashboard. Updated in real-time. Available for both Kebony Inc. (US — by Sales Area) and Kebony BNV (Belgium — by Country). Pivot, graph, and list views. Exportable to Excel with one click.
